PROFILE

Full stack developer across web, mobile and the services behind them. In my first year of full-time work I have shipped React applications and the TypeScript APIs they run on, while delivering two freelance product builds remotely alongside it. Used to owning my own schedule and unblocking myself.

SKILLS

Frontend & mobile

React 19, Next.js 15, Vue 3, TypeScript; responsive UI with Tailwind and Ant Design; TanStack Query, Zustand; React Native / Expo.

Backend & data

Node.js, NestJS, Express, Azure Functions; REST, GraphQL, OData; PostgreSQL, MongoDB, MySQL, Redis; Prisma, Hibernate.

Cloud, DevOps & testing

Azure; Docker; GitHub Actions CI/CD; SonarCloud gates; Vitest and Jest unit + e2e tests; GitFlow, Conventional Commits, code review.

Integrations & AI

Payments (PayOS, ZaloPay, MoMo); auth (Clerk, NextAuth, Firebase); realtime and push (Socket.IO, FCM); LLM APIs (Azure AI Foundry, Google GenAI); vector search (Pinecone).

English

Working-level reading and writing; conversational speaking. I read API specs daily and write commits, pull requests and documentation in English.

EDUCATION

B.E. Software Engineering

FPT University, Quy Nhơn Campus
Sep 2021 — Nov 2025 · **GPA 3.2/4**

WORK EXPERIENCE

Tech Officer — Full Stack Developer

Nov 2025 — Present

WeCare Group · Quy Nhơn, full-time

- **Built five internal React applications end to end.** Multi-level approval with threshold-based auto-clearing, reconciliation screens and a configuration explorer, with role-scoped access and shared component conventions.
- **Designed the TypeScript services behind them.** REST endpoints on Azure Functions with query building, paging and one consistent response envelope, so the front end handles one shape instead of several. Bulk actions re-read real state before writing.
- **Integrated third-party systems that were never meant to talk.** Two-way sync with an external accounting platform and an e-invoice provider: signed requests, incremental sync from a watermark, writes keyed on a business key so retries never duplicate.
- **Shipped an AI-assisted feature to production.** Line-item matching resolves predictable cases with deterministic rules and escalates only ambiguous ones to an LLM agent — lower cost, and results reviewers can explain. Migrated it to a new model and API when the old one was retired.
- **Found and fixed a data-isolation bug in production.** One customer's records were surfacing under another; the query filtered only one side of a relationship. Corrected it and reconciled the totals before closing.
- **Worked to a reviewed pipeline across 13 repositories.** GitFlow, CI gates on lint, build and tests, deploy on merge, SonarCloud.

Full Stack & Mobile Developer

Nov 2025 — Jul 2026

Âu Châu Education · freelance · team of 10

- **Vue 3 dashboard the offices run on.** Students, parents, classes, schedules, exams, course materials and tuition across several centres, with responsive layouts and documents generated on the server instead of rebuilt by hand.
- **React Native app delivered alongside it.** Course content, attendance, homework and tuition, with push notifications, EN/VI localisation and local caching that keeps the app usable on a weak connection. I owned the sign-in and token-refresh flow.
- **One feature, whole stack.** Followed each change from the admin screen through the API to what a student sees on their phone, and shipped to both platforms from one codebase.

Backend Developer

Jun — Jul 2025

PAXU · MMS Software · freelance · team of 7

- **Backend for a personal-finance product.** Spending management, borrowing and repayment capacity, fee estimation and cost-of-living comparison.
- **Led a platform upgrade on a live system.** Moved the application framework and database across several major versions, sequenced so existing users kept working throughout.

PRODUCT PROJECTS

- **BrainBox** — e-learning marketplace. Backend developer and team leader, team of 6: course, payment and instructor-revenue services; Clerk auth with webhooks, PayOS payments, Socket.IO chat, Next.js front end for three roles.
- **TheSync** — thesis and group management platform, graduation capstone. Backend developer and team leader, team of 5: NestJS + Prisma + PostgreSQL, semantic matching with Google GenAI embeddings and Pinecone, jobs on BullMQ and Redis.
